# Today's Discussion

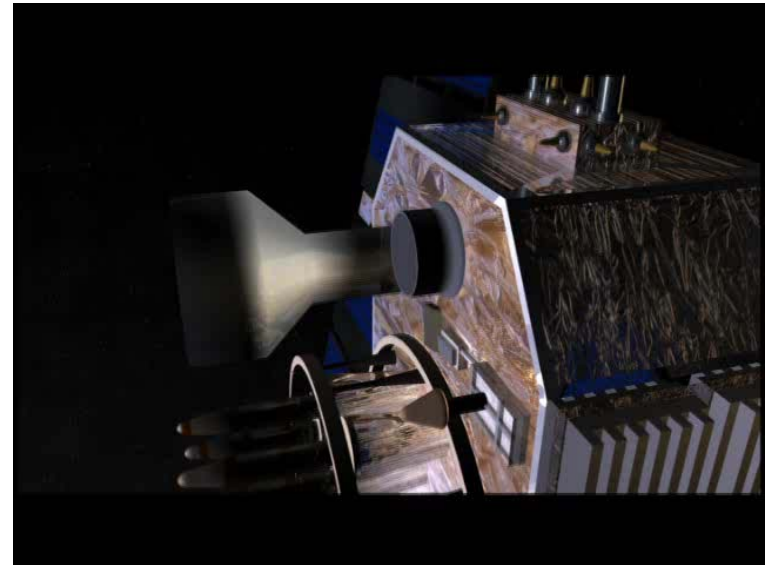

- Location Technology Basics
- Defendant Monitoring
- Victim Notification
- Agency Responsibilities

# Location Technology Basics

- Location verification technologies
  - GPS
  - Cellular Network Towers
  - Radio Frequency
- Communication
  - Cellular Network
  - Home-based dialers

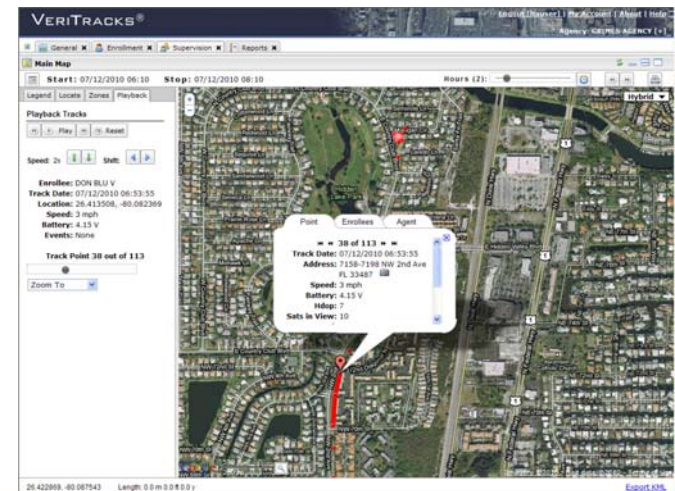

# Defendant Monitoring

- Active, real time communication
- Requiring at least one GPS location point once every minute
- Body worn device to prevent defendant from not being tracked
- Simple to use to prevent agency or defendant compliance issues
- Mobile zones that move with the defendant for comparison with victim location
- Agency or vendor monitoring services vital to provide appropriate notifications

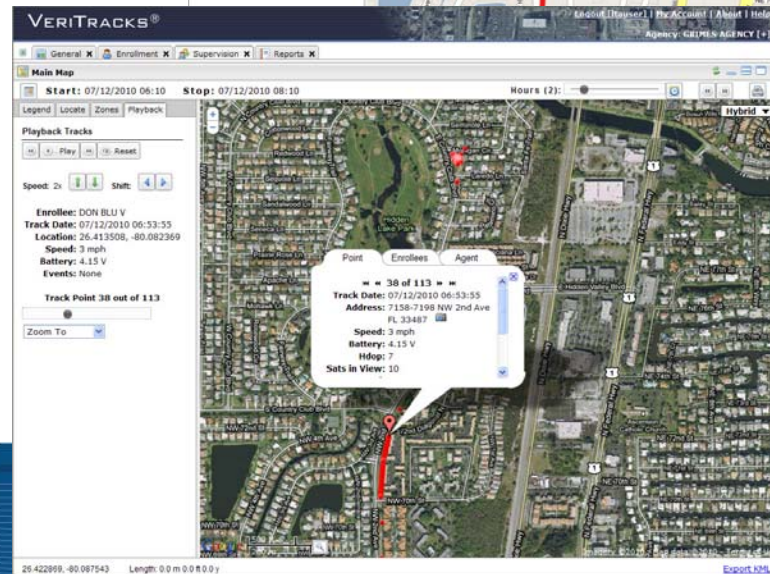

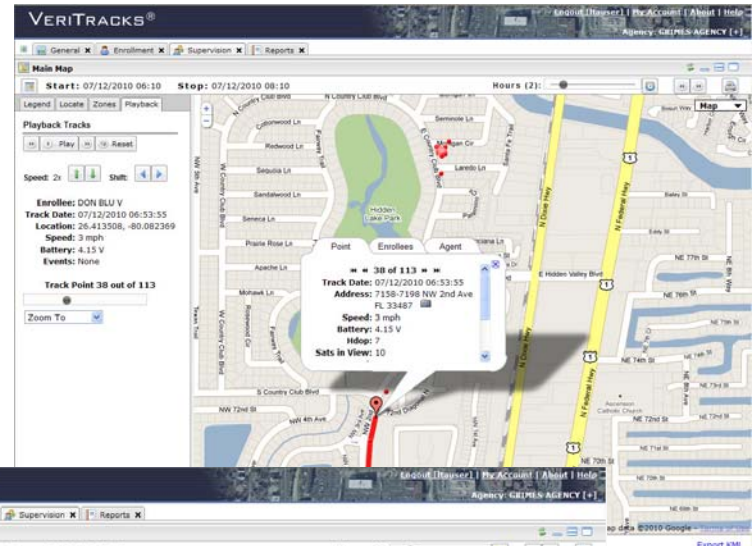

# Victim Notification

- Victim residences, work, schools, children's activity areas are "geo-fenced" to notify the agency and/or the victim of the defendant's presence.
- Victim notification device is carried by the victim and the system compares the location of the defendant with the location of victim
- Victim notification device can emit audible tone and send text message to victim's cell phone when the defendant commits a violation

# Google Maps™

- Same interface as online Google, including satellite photos
- Displays GPS and cell tower tracks
- User-defined layers
- Streetview, where available
- Multiple enrollees on map
- Playback tracks
  - Date/time range
  - Zoom
  - Reverse geocoding
- Edit zones on map
- Measurement function

# About Satellite Tracking of People LLC

Satellite Tracking of People LLC

- A Customer-focused, technology-driven, long-term vision Company
- Headquartered in Houston, Texas, with Operations Office in Reston, Virginia
- ISO-9001 certified Assembly, Manufacturing and Design
- Most experienced one-piece GPS monitoring device and original developer of victim specific notification device
- Currently conducting business in 40+ states and several international markets
